SEED1 - Laborator
Instrucțiuni preliminare

Instructor: Conf. Dr. Teodor-Ștefan Bîldea
SIIPA, An I, Semestrul I

Sumar

- Instalare distribuție Anaconda
- Construirea unui mediu (env) dedicat cursului

Instalare Anaconda

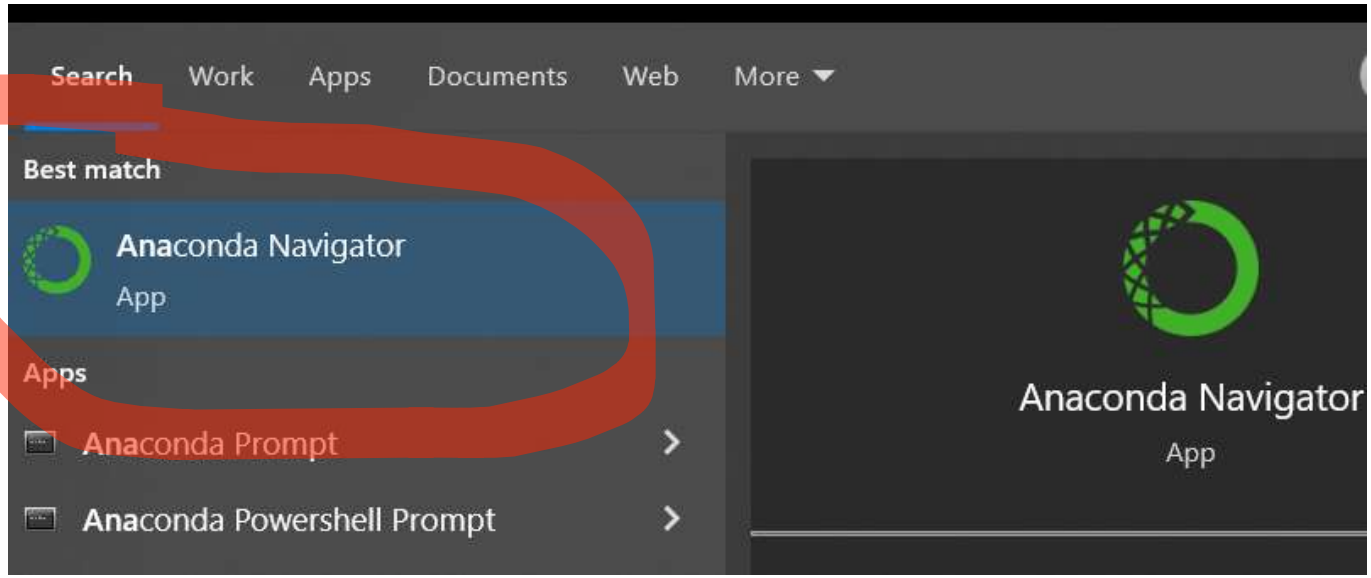

Urmați instrucțiunile de la

- https://code.visualstudio.com/
- https://antigravity.google/product/antigravity-ide/

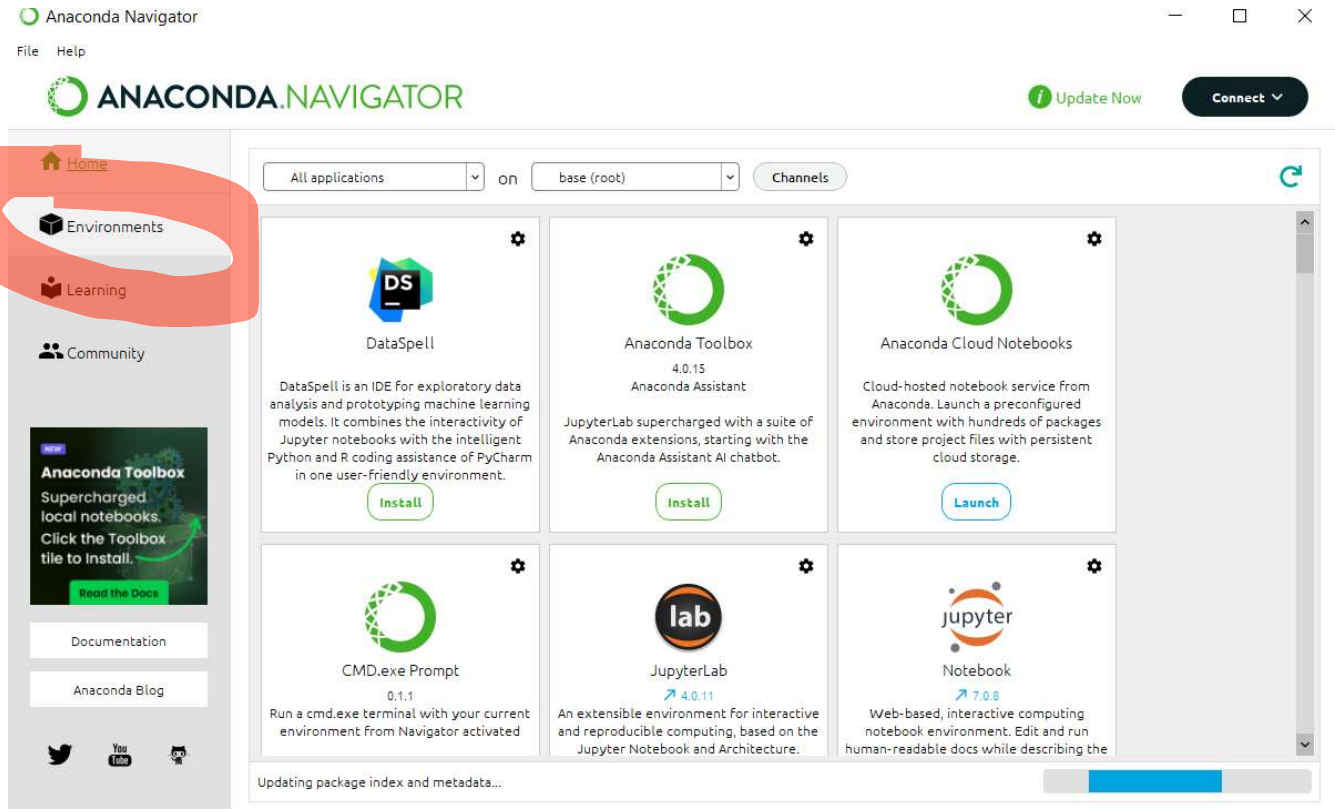

Construirea unui mediu (env) dedicat cursului

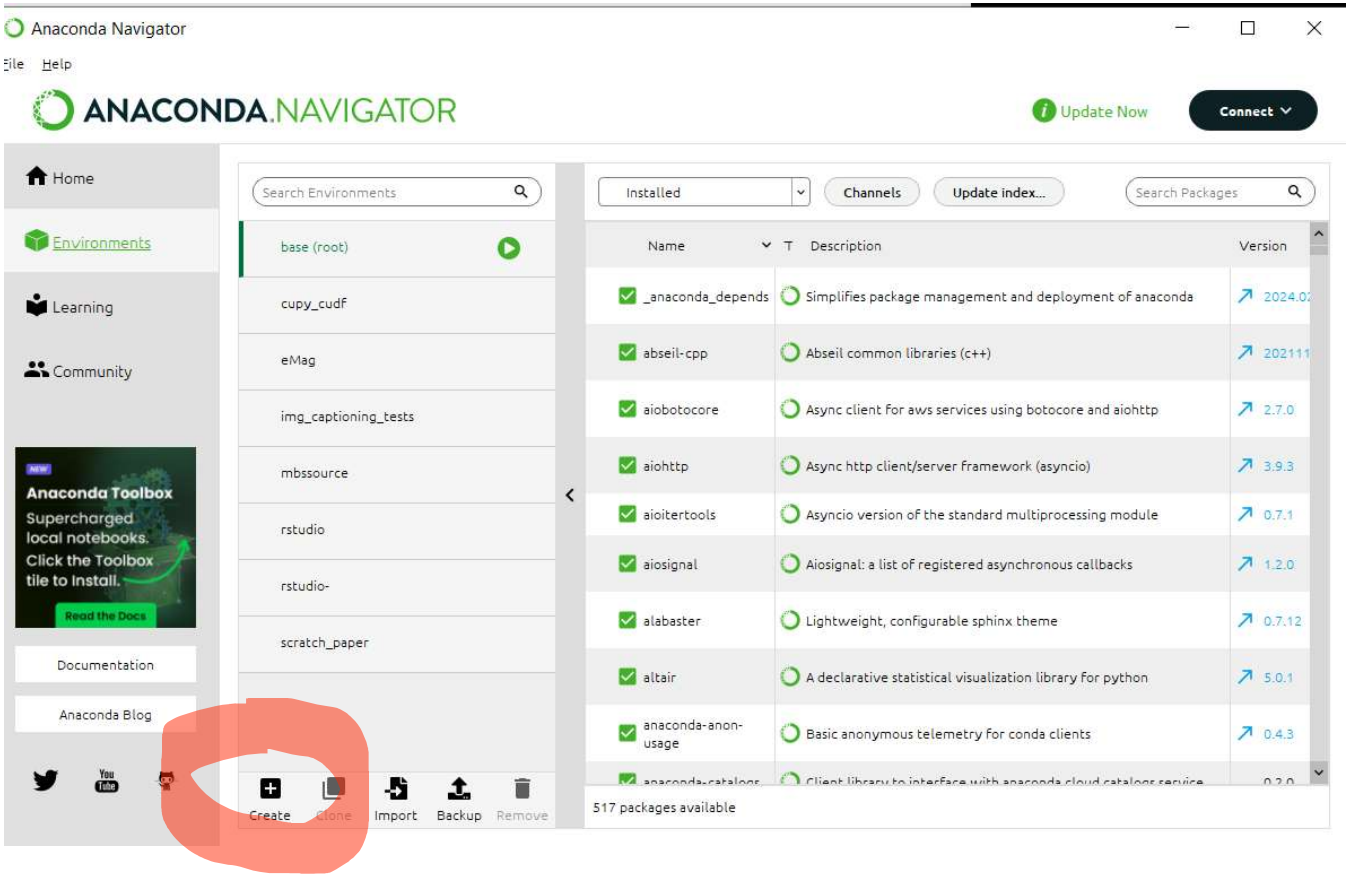

Start -> Anaconda Navigator App

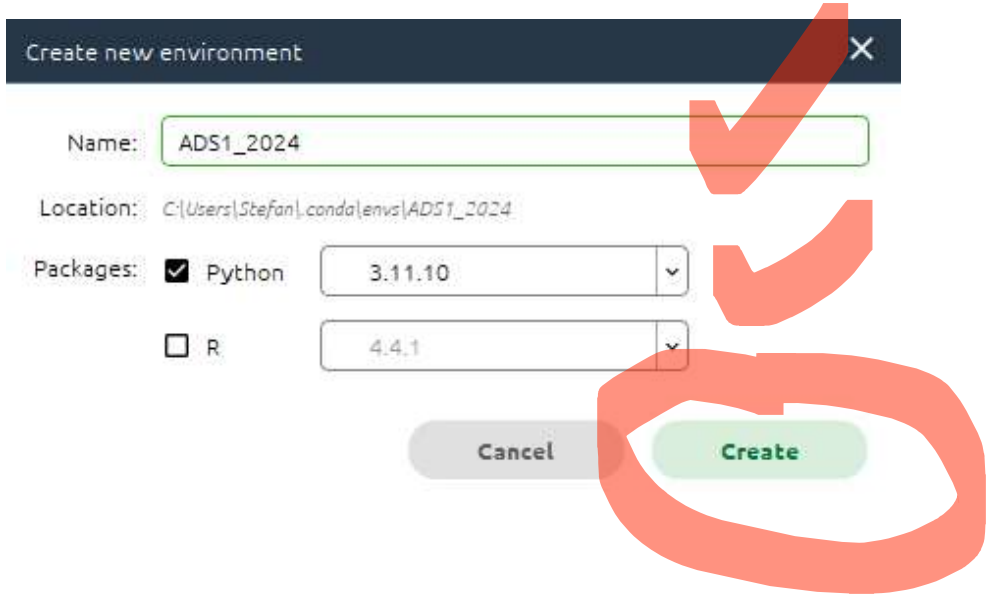

Click Environments

Click -> Create+

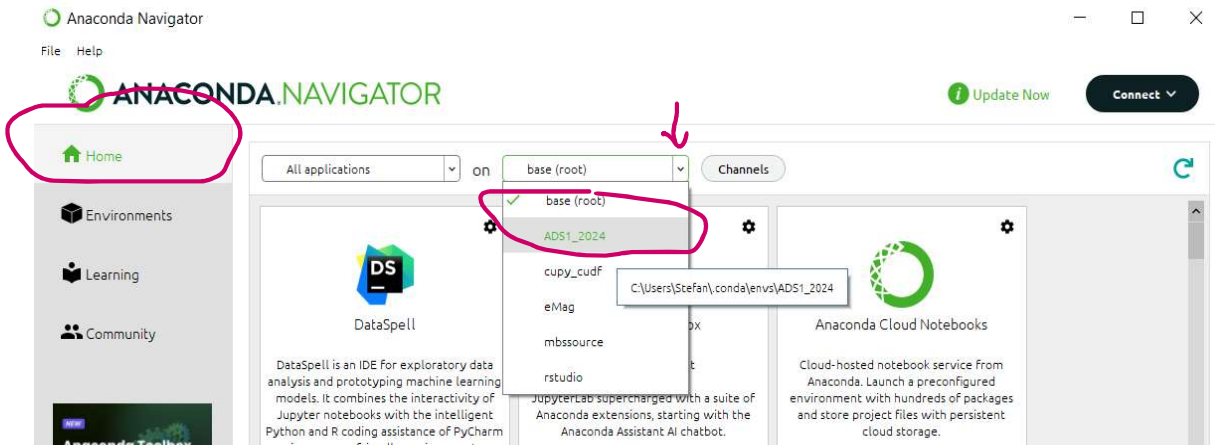

Nume = ADS1_2024, Python bifat, click Create – Gata!

Instalare VS code si/sau Jupyter notebook – aici veti scrie cod

- Click Home
- Deschide dropdown cu mediile existente
- Alege ADS1_2024

Instalare aplicatii – VS code/Jupyter

- Gasiti aplicatia dorita
- Daca e deja instalata o puteti deschide de aici cu Launch
- Daca nu e instalata, o puteti instala cu Install
- Atentie:
  - Instalat asa nu am reusit sa pornesc VS code decat din Anaconda Navigator
  - Daca aveti instalat VS code se poate folosi direct si o conecta cu mediul ADS1_2021
  - Personal am inceput sa lucrez mai mult VS Code pentru ca permite Debug la nivel de celula in fisierele ipynb (jupyter notebook)
